

Product

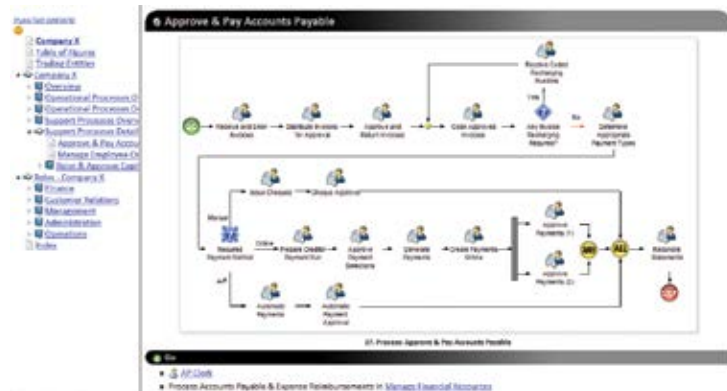

Epicor® ERP

Benefits

- ▶ Develop a dynamic business environment that is flexible and agile
- ▶ Turn an ERP investment into ongoing business improvement
- ▶ Help cut the cost of compliance and lift operational effectiveness
- ▶ Help ensure an on-time on-budget Epicor implementation
- ▶ Help drive a greater return on their ERP investment

Implementing or updating an Epicor solution typically means a change to the way your business operates. Those involved with this change need to collect a lot of information to clearly understand the impact of the new technology on current work functions. The same information you collect to ensure a smooth technology introduction can also be used to support Lean process improvement, achieve compliance certification, or just make it easier for staff to do a better job.

XSOL InOrder™ is an Enterprise Process Planning (EPP) solution that helps you visualize, define, improve, and implement your new or updated business processes. This dynamic tool allows you to rapidly improve the way you do business by capturing critical business processes that you can use to model, document, and deploy to everyone in your organization, at anytime. It also allows you to analyze processes to make sure they are as Lean as possible. All of these factors improve efficiencies, enhance the way you can conduct your business, and drive a greater return on your ERP investment.

XSOL InOrder replicates the structure and components of business in a model that drills down to individual staff roles and the tasks they undertake. At the push of a button, procedural details in the form of numbers, text, tables, images documents, and videos can be added to the structure. The model's content can then be deployed to your Intranet as a Web or Word document. Any subsequent changes you make can be republished instantly to the applicable parties involved with the process. Because XSOL is a model, when updating processes the user only needs to make a change in one place. XSOL automatically updates all affected areas and shows where the change might create a problem. Process documentation created by other means, such as flowcharting tools, require users to remember each place that may be affected by a change and to hope that the updated flowcharts and text are in sync. This can lead to mistakes and a longer revision process.

XSOL InOrder also has management analytics that show the effectiveness of your business based on the data captured at the workplace level when defining a process. With just a little extra effort, the data collected can deliver a diagnostic of the health of your business processes.

XSOL for Epicor implementations

XSOL InOrder helps your Epicor solution support your processes and competitive advantages. It is designed to ensure the success of your implementation or upgrade and to improve the ROI.

Through the use of XSOL, Epicor offers unique leverage for an ERP implementation investment. Building off the base of collected information to facilitate the ERP implementation, you are able to develop an agile and dynamic business environment.

The unique features of XSOL InOrder Enterprise Process Planning

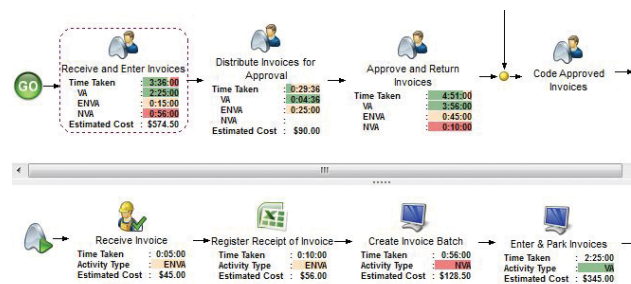

XSOL InOrder provides Enterprise Process Modeling, enabling organizations to model their business. What makes the product unique is its structured model that provides unprecedented ability to rapidly and economically accommodate change. The structure also enables two other benefits; it provides executive management with a robust analytical tool and it gives operational management the ability to deploy on-demand directly to the staff's workplace.

- ▶ **Enterprise Operational Analytics:** XSOL InOrder lets you categorize and aggregate data attached to a model and report it at any level in the organization. It supports Lean initiatives with Value Stream Mapping, displaying color-coded values against each task in a process. For example, with XSOL, a manager can easily drill down into the company to see exactly where resources are being wasted. They can also see the progress of an implementation project in terms of time, cost, and risk.

- ▶ **Process Execution Integration:** In the implementation of a modified process or a new system, and for training new employees, XSOL InOrder can provide staff with the software and electronic media they need to do their job when it is needed. From a click of an icon within XSOL, they can access forms, documents, training materials, and ERP functions.

Realizing a return on your investment

Though this powerful tool, you can help to preventing budget over-run for a process change or new system implementation by specifically identifying the cost of changes at the outset and providing an itemized cost schedule for the implementation steps and components. You can also identify waste stemming from a duplicated or redundant activity, as well as from work that does not add value to an outcome. The end result is a more productive and cost-efficient organization that can contribute to your bottom line.

About Epicor

Epicor Software Corporation drives business growth. We provide flexible, industry-specific software that is designed around the needs of our manufacturing, distribution, retail, and service industry customers. More than 40 years of experience with our customers' unique business processes and operational requirements is built into every solution—in the cloud, hosted, or on premises. With a deep understanding of your industry, Epicor solutions spur growth while managing complexity. The result is powerful solutions that free your resources so you can grow your business.
